## Bareos project on Linux Tag Berlin 2014

2014-05-02 16:00

More than 80 exhibitors show the power of Linux and Open Source at their booths. Besides the exhibiting companies also a lot of free projects are present, which develop software within their community.

Bareos project members will answer questions, help you with your Bareos installation or give you an introduction into programming Bareos plugins with the new Python plugin interface.

Together with the REAR project we will demonstrate Bare Metal Recovery for Linux clients.

### **First-Class Lectures on Current Topics by International Speakers**

Look for inspiration and impetus from our keynote speaker for the coming year of Open Source: A selection of our priorities this year relate to the professional application of Linux and Open Source (cloud computing, OpenStack Day, logging and tracing, Big Data Storage).
