

Can I migrate from Bacula to Bareos?

Yes, there is an upgrade path.

We suggest that you start upgrading all your filedaemons (fd). As the bareos-fd is compatible with bacula-dir, you can do this step by step and stay live with your existing installation.

After that you have to update your storage daemon and director. The upgrade procedure is similar to upgrade from one Bacula version to another.

Please read the details in our [HOWTO](#) section.
