

# What are the requirements for the Bareos VMware Backup Plugin?

The Bareos VMware Backup plugin requires

- a working Bareos with a filedaemon version  $\geq 15.2$ , we've ready to install packages for the following Linux distributions:
  - RHEL 7 / CentOS 7
  - Debian 8
  - SLE 11\_SP3 and SLE 12
  - The plugin has some dependencies and creating proper repositories requires effort, repositories for other distributions may follow.
- The VMware 5.x vSphere® Storage APIs for Data Protection, which requires at least a VMware vSphere® Essentials License. It does not work with standalone unlicensed VMware® ESXi™
