

Bareos Project News Reader

Two Maintenance Releases

2020-12-15 10:26

18.2.10 and 19.2.9 are mainly bugfix releases and solve some issues with the Bareos Director crashing (memory access violation), a memory corruption when autolabeling, WebUI login, backup/restore of CephFS mounts, and the File Daemon's LDAP plugin.

We've have also upgraded the VMware VDDK (Virtual Disk Development Kit) to version 7. Our Bareos [VMware plugin](#) is now able to back up virtual machines running on vSphere 6.5, 6.7, 7.x and the following major version.

There are new packages available for the following Linux distributions:

- Ubuntu 20.04 (only for Bareos 19.2)
- SLES 15 SP2
- openSUSE Leap 15.2
- UCS 4.4
- FreeBSD 12.2

For more information, please have a look at the release notes for Bareos [19.2.9](#) and [18.2.10](#).
