Bareos 17.2.6 maintenance version published

2018-06-22 14:44

The new Bareos 17.2 maintenance version contains improvements and bugfixes. [Subscription](#) customers can find installation packages for Windows and all supported Linux distributions in their repositories. The source code is, as always, available on [GitHub](#).

With 17.2.6 we've added some new distributions to the build process:

- Fedora 17 and 28
- openSUSE 15
- Ubuntu 18.04
- Univention Corporate Server 4.3

Apart from the new distribution it is a maintenance and bugfix release. A director-crash after reloading with statistics collection enabled was fixed as well as predefined queries and a problem regarding file selection for restore.

You find more details in the release-ticket <https://bugs.bareos.org/view.php?id=916> and [release notes](#)
