Bareos Trainings in English

2020-07-20 16:44

In [two courses](#) our training partner Dr. Stephan Rein shares his knowledge about the administration of the Open Source backup solution. The two online courses "Bareos Level 1 and Level 2" first took place in June, and due to several requests from our international partners they will now be held in English language. Since both workshops are half-day courses, this leaves enough time to cope with other daily work.

Bareos, Level 1:

- Introduction to Bareos
- Differences between Bacula and Bareos
- Installation and Update
- Basic Configuration
- Backup and Restore
- Backup Strategies
- Volume Management I: (Backup2Disk)
- Volume LifeCycle Management
- Bareos Tools/Utilities
- Disaster Recovery (**NEW:** Disaster Recovery with Bareos and [ReaR](#))
- Troubleshooting

Bareos, Level 2:

- Volume Management II: (Backup2Disk2Tape)
 - Backup on Tape
 - Autoloader/Tape Library
 - Migration and Replication (Copy Jobs)
- Bareos scaled/parallelized: Concurrent Jobs
- Synthetic/virtual Full Backup
- Encrypting your Data

There will be plenty of exercises that the participants perform on their own computers (prerequisite: Windows, macOS or Linux). Exercises take place in specially provided virtual Linux servers running in VirtualBox. The participants work with PuTTY (Windows) or SSH (Linux, macOS). **Prerequisites:** Participants should be familiar with the Linux console and a text editor (e.g. Nano, Joe, Emacs, Vi(m) etc.).

Level 1 (5 afternoons) costs 1159 Euro (including VAT), Level 2 (3 afternoons) 695 Euro (including VAT). If you'd like to combine the courses, they cost 1739 Euro in total. There is a **10 % discount** for customers with a valid [Bareos Subscription](#). Please register via the [backup & recovery website](#) and drop us an email.
